

Installation Guide - Pavers

1. CHOOSE PAVER

Determine the area to be paved and how much material will be needed. Choose paver shape and pattern. Estimate quantity for paved area.

2. EXCAVATE

Have utilities marked and excavate area to be paved. The heavier the surface load, the deeper the base excavation. Be sure you have plans for relocating the soil and sod. Compact exposed base area.

3. PREPARE BASE

Install geotextile and base aggregates. Turn cloth up at sides of base. Place aggregates over cloth to required depth and compact to 95% solid. Set posts and stringlines for final base grades and finished paver elevations.

4. SET ELEVATION

Install C-33 concrete bedding sand and screed smooth for setting pavers to finished elevation. Allow 1/4" height for paver settling during placement.

5. PLACE PAVERS

Place pavers on screeded sand setting bed. Use string lines to keep pattern straight. Set hand-tight joints. Cut pavers in areas as needed to complete pattern.

6. SET EDGING

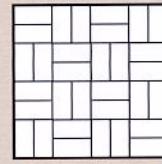

Set plastic edging tight against all exposed paver edges and spike firmly every 24" for walkways and 12" for driveways and curves. Edging works best if set on aggregate base after trimming sand setting bed flush with outside edge of pavers.

7. SWEEP JOINTS

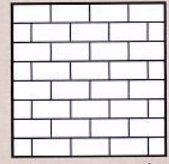

Sweep dry C-33 concrete sand or other selected joint material into all joints and compact to complete interlock process. Refill to desired level after early weathering. Sweep up, clean up and enjoy your new paver installation.
